

# How Fast do BB Guns Shoot?

Capitalize the first letters in the title as if writing a book title. Never change the title. Write it exactly as given.

When I was recently buying a new bb gun, I wondered how fast they shoot. So, I did some research and testing to find actual speeds of many common bb guns.

The first paragraph has two purposes: (1) Clearly identify the topic and give confidence that you have the answer; and (2) Establish rapport with the reader, and develop interest. Make sure they know you're a real person.

So how fast do bb guns shoot? **An average bb gun shoots between 300 and 1,500 fps.(feet per second). Most bb guns for youth shoot under 800fps, while adult bb guns generally shoot between 750 and 1,500 fps. The speed of the gun is mostly determined by the method of how that gun propels the bb.**

This is the answer paragraph. Restate the question first. Then, give the most crystal clear answer to the question you can possibly write in 200-300 characters. Someone should be able to read JUST this paragraph alone and have a clear answer to the question without reading anything else. Do not get creative or "folksy" in your writing in this section. Write this as if you were writing an encyclopedia entry. For a "How to" article or a "List Post", this paragraph may be a bulleted list of the steps or ideas.

Many new bb gun shooters select a gun based on which can shoot the fastest. There is actually a lot to choosing the right speed of gun for your application, and the speed advertised on the box is rarely accurate.

The third paragraph is designed to intrigue the reader so that they are enticed to read more. Tell them what more information they will get by reading on.

## BB Gun Speed Test Results

The first subheading should elaborate on the answer paragraph. The answer paragraph gives a quick answer but may not help address the nuances of the subject. This is your opportunity to dive in with more detail. This could contain a bulleted list of examples, caveats to the general answer, or a more helpful and detailed description.

This is an important section, so it should be no less than 300 words long.

## Choose the Right Speed for Your Application

## How BB Gun Speed Affects Safety

## Why You May Not Want the Fastest BB Gun

Include 3-5 subheadings. Between each subheading, add the main content for your article. The purpose of the main content is to read the mind of the person who searched this topic. What other questions will they likely want an answer to after they have read your information above? Keep subheadings directly on point to the topic without going too far afield.

## Related Questions

**Are bb guns dangerous?** BB guns are not toys and can cause serious injury or death if used improperly; however, many bb guns are designed for youth and shoot under 500fps. If eye protection is worn, these guns are unlikely to cause serious injury and are generally safe.

**How fast do pellets shoot?** In general, pellets fly approximately 20fps slower than bbs when fired from the same gun; however, more powerful airguns are generally made to shoot only pellets and thus would shoot much faster.

Write 2-3 additional related questions. These questions can be less tightly related to the question answered in the rest of the post. Bold the question and then directly answer them as if writing an answer paragraph.
